

Tip-Out Trays

(12K76.01+)

The following instructions were provided by the manufacturer.

Tools Required

- #2 Phillips screwdriver
- Optional Drill and 3/32" drill bit

Self-Holdin' Hinge Installation

Step 1 - Remove front panel or panels from sink cabinet.

Step 2 - Install the hinges to both sides of the cabinet as shown in Figure A. Locate the front edge of the hinges flush with the outside of the cabinet and install the flat head screws provided in the approximate middle of the elongated holes. This will allow for a future "up and down" adjustment of 3/16".

Step 3 - Mark the back of the panel with the cabinet opening less the 11/16", distances shown in Figure B. Both marks should be equal from the sides.

Step 4 - Measure the height of the elongated slots using the original panel position as your reference point. Mark the panel. Install the panel to the hinges using the Truss Head Screws provided.

Figure A

Figure B

Polymer Tray (Standard Accessory) Installation

Step 5 - Close the panel, reach inside the cabinet and draw a line across the top of the frame opening on the back of the panel. Open the hinged panel and draw another line $\frac{1}{8}$ " below the top of the Tip-Out Tray.

Step 6 - Place the top of the tray against your gauging line, centered between the hinges, and mark the center of the top portion of the mounting holes. Apply the screws of sufficient depth to allow removal of tray for future cleaning.

Note: In most cases it is easier to remove the panel from the hinges for tray installation, reinstall and adjust the panel and then slip the tray on the screws.

Helpful Hints

- a. A small amount of bar soap on the screw threads will reduce the initial installation effort.
 - b. Pre-installation of the screws or pre-threading into holes will also ease final installation.
 - c. Your new trays are made from a hi-impact polymer and may be cleaned using mild soap and water. Avoid scalding water, harsh abrasives and dishwashers.
-
