

Contents: Calcium carbonate.

Chalk container filled by weight, not by volume.

Cautions:

- **Do not** use this product for any other use.
- **Avoid** contact with eyes or skin. Wear safety goggles. If any powder gets in your eyes or on your skin, rinse thoroughly with water.
- **Do not** breathe dust. Wear a dust mask when using this product to prevent inhalation of the chalk powder.
- Keep out of reach of children.

The chalk powders are available in vivid blue (sodium aluminosulphosilicate) or red (red iron oxide), and have a fine consistency for uniform line absorption and release.

How To Fill the Chalk Line Case

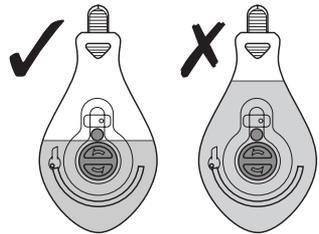

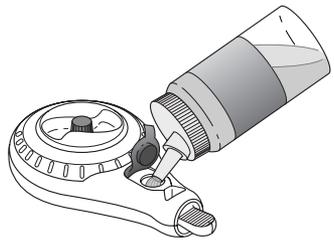

Pull back the black rubber tab on the case and pour chalk powder into the hole until the case is about half full. If there is too much chalk in the case, it might clog the spool and jam the automatic rewind mechanism.

Note: Depending on the material being marked, the chalk line may leave a permanent mark. If this is a concern, test on a scrap workpiece before using.

Ensure the rubber tab is properly closed after recharging the case.

Store in a cool, dry place when not in use.

Note: Do not use damp powder, as this will clog the automatic rewind mechanism.
