

## Magnetic Spring Clip

50K03.01

 **Caution:** Strong magnetic field. Keep magnets away from all electronic equipment or other items that have information stored magnetically. Magnets can corrupt stored data if placed too near.

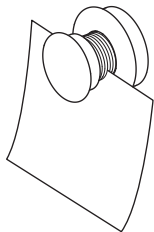

**Note:** Disc is included to contain magnetic field. Remove prior to use.

The magnetic spring clip features a strong  $5/8"$  rare-earth magnet so it can be affixed to any steel substrate. To remove the spring clip from the steel, be sure to grip the base, not the knob. Pulling excessively on the knob can permanently distort the spring, rendering it ineffective for gripping paper.

Pull the knob outward and place the paper between the spring coils. When you release the knob, the spring will recoil and grip the paper.
